Phoseon Technology Unveils New LED Curing Solution for Narrow Web at Labelexpo Americas

The new light source offers increased durability and smaller form factor

Hillsboro, Oregon (August 31, 2016) - Labelexpo Americas will reveal Phoseon's new FirePower™ FP601 water-cooled LED curing solution for narrow web printing, along with a wide array of existing solutions for the label market. With increased durability, the FirePower is IP54 rated for increased protection. Integration into restricted spaces is now possible with the smaller form factor.

With reduced power and cooling requirements from the previous generation, the FirePower delivers a high peak intensity of 20W/cm². Installation is simple because no tools are

required for power, data and water connections. Equipment providers can use the advanced communications features provided via Ethernet-based Modbus/TCP capability.

Joe Becker, Product Marketing Manager at Phoseon Technology says, "The FirePower brings customers a high-performance, low-maintenance solution that translates directly to increased productivity and improved profitability. Phoseon's LED technology allows new revenue opportunities while also saving energy and eliminating replacement part costs."

Phoseon offers fully integrated LED retrofit solutions for flexographic printing that consist of station-by station building blocks including light sources and the Flex Tower modular power and control system. Phoseon's LED technology offers printers and converters the ability to print on heat sensitive and thinner substrates, faster curing speeds, and a more reliable curing process. Visit booth 3712 to upgrade your press with LED curing.

Labelexpo Americas 2016 will be held at the Donald Stephens Convention Center in Rosemont, Illinois, September 13-15. Labelexpo Americas is the largest event for the label and package printing industry in the region.

About Phoseon Technology

In 2002, Phoseon Technology pioneered the use of LED technology for UV curing applications. As the world leader in UV LED curing, Phoseon provides patented LED technology to deliver rugged, high-performance products for application specific solutions. The Company is focused 100% on LED technology and provides worldwide sales and support capabilities.
